A technical author should have excellent writing and communication skills, strong attention to detail, the ability to understand complex technical concepts, proficiency with documentation tools (such as Markdown, XML, or DITA), and familiarity with software development processes.

How do you handle writing documentation for a highly technical audience versus a non-technical audience?

For a highly technical audience, documentation should include detailed technical explanations, code snippets, and precise terminology. For a non-technical audience, the language should be simplified, jargon minimized, and concepts explained with analogies or visuals to ensure clarity.

Can you describe your experience with documentation tools and content management systems?

I have experience using tools such as MadCap Flare, Adobe FrameMaker, Confluence, and Git for

version control. I am also familiar with markup languages like Markdown and XML, which help in creating structured and reusable content.

How do you ensure the accuracy and quality of your technical documentation?

I ensure accuracy by collaborating closely with subject matter experts and developers, conducting thorough research, and verifying technical details. For quality, I perform multiple rounds of editing, peer reviews, and usability testing to make sure the documentation is clear, concise, and user-friendly.

Describe a challenging documentation project you worked on and how you managed it.

In a previous role, I worked on documenting a complex API with rapidly changing features.
