**technical skills consist of the: Perspectives on Power** Jernej Letnar Čerňič, Lindsay Milligan, Heather M. Morgan, 2010-01-08 Although 'power' can appear a vague term, the dichotomy between haves and have-nots, the desire to gain autonomy, and the dire consequences of subjugation, are three issues that resound across the arts and social sciences. In this book, postgraduate students from the constituent disciplines use the freedom of their positions as early-career researchers to boldly explore power relations. From a legal perspective, papers are included geared towards human rights issues and violations. Further, the applied perspectives from business and education researchers consider how access to wealth and education, and to equal education, can and must be achieved. Then, interpreted through the perspectives of anthropological, sociological, and historical approaches, power has become a resonant issue among the creations of culture and human interaction(s). Finally, within the 'soft' sciences, the very same preoccupations, as they appear in creative expression, are examined within literature and music. Indeed, through the twenty-one articles chosen for inclusion in this collection, distinct in their disciplinary origins,

approaches and foci, together the authors are emphasising the many similarities that exist among the arts and social sciences subjects. 'Perspectives on Power: An Interdisciplinary Approach' was conceived as a result of the quality and reception of papers presented at the 2008 Moving Forward Postgraduate Conference, held at the University of Aberdeen. The volume comprises twenty-one articles on the theme of 'power', carefully chosen by the editorial team from in excess of eighty presentations. These represent and tender a wide range of scholarly approaches to and within the arts and social sciences; the remit of Moving Forward. The collection is aimed at scholars and scholarly institutions within the United Kingdom in particular, but contains contributions from scholars across the globe. The collection should especially appeal to and inspire delegates visiting the Moving Forward Postgraduate Conference in the years to come.

**technical skills consist of the:** Contracting Masculinity Gillian Creese, 1999-12-15 The history of labour in Canada is most often understood to mean - and presented as - the history of blue-collar workers, especially men. And it is a story of union solidarity to gain wages, rights, and the like from employers. In Contracting Masculinity, Gillian Creese examines in depth the white-collar office workers union at BC Hydro, and shows how collective bargaining involves the negotiation of gender, class, and race. Over the first 50 years of the office union's existence male and female members were approximately equal in number. Yet equality has ended there. Women are concentrated at the lower rungs of the job hierarchy, while men start higher up the ladder and enjoy more job mobility; men's office work has been redefined as a wide range of 'technical' jobs, while women's work has been concentrated in a narrow range of 'clerical' positions. As well, for decades Canadian Aboriginals and people of colour were not employed by BC Hydro, which has resulted in a racialized-gendered workplace. What is the role of workers and their trade unions in constructing male and female work, a process that is often seen as the outcome solely of management decisions? How is this process of gendering also racialized, so that women and men of different race and ethnicity are differentially privileged at work? How do males in a white-collar union create and maintain their own image of masculinity in the face of a feminized occupation and a more militant male blue-collar union housed within the same corporation? What impact does the gender composition of union leadership have on collective bargaining? How do traditions of union solidarity affect attempts to bargain for greater equity in the office? These are the central questions that Contracting Masculinity seeks to answer in this in-depth look at a Canadian union.

**technical skills consist of the:** *The Impact and Legacy of Educational Sloyd* David J. Whittaker, 2013-09-11 Originating in Finland in eighteen-sixty-five, Educational Sloyd used handicrafts practised in schools to promote educational completeness through the interdependence of the mind and body. These radical ideas spread throughout Europe and America and had a significant impact on the early development of manual training, manual arts, industrial education and technical education. Today it is generally acknowledged that Educational Sloyd laid the foundations of modern technological education. This book traces the development of Sloyd from its conception by Uno Cygnaeus and the first Sloyd school founded by Otto Salomon, to its enthusiastic take up in Scandinavia and beyond. It examines the debates and controversy which surround the Sloyd system, and considers the transition from 'hands-on' craft work to concepts of technology education. Finally, the investigation reveals the lasting legacy of the ideas and practice of Sloyd education, and how it continues to influence technological education. Included in the book: - the foundations of Educational Sloyd - debates, controversy and rival factions - key case studies in Finland and Iceland - the lasting legacy of Sloyd education. This fascinating and comprehensive historical exploration will be of interest to scholars and researchers in the areas of technology education, comparative education and the history of education.

Against this background, businesses increasingly report that the limited availability of skills poses an impediment to corporate investment. Genuine skill constraints can negatively affect labour productivity and hamper the ability to innovate and adopt technological developments. For individual Europeans, not having the right skills limits employability prospects and access to quality jobs. For Europe at large, persistent skill gaps and mismatches come at economic and social costs. This paper reviews the recent economic literature on skill mismatch and skill shortages, with a focus on Europe. It questions: how the job requirements of individuals can be measured; whether skill shortages stated by employers reflect the lack of suitable candidates or are due instead to the wage and working conditions being offered; what economic costs are posed by skill mismatch and shortages; and how policy can address the issue of skills, including the role of EU policies.

**technical skills consist of the: *The Sceptical Idealist*** Roy Tseng, 2003 This is the first book-length study to provide a structured interpretation of the significance of Michael Oakeshott's critique of the Enlightenment. By seeing the thinker as a 'sceptical idealist' posing a serious challenge to the intellectual positions informed by the Enlightenment, this book attempts to resolve some of the issues debated by Oakeshott scholars. The author argues that Oakeshott's famous critique of philosophisme and Rationalism in fact expresses a sense of the crisis of philosophical modernity. Moreover, notwithstanding some recent interpretations, throughout his intellectual career Oakeshott has never altered his analysis of these two themes: philosophy as the persistent re-establishment of completeness by transcending abstractness, and the modes of experience as self-consistent worlds of discourse. To apply this philosophy in his moral and political writings, Oakeshott has redressed an imbalance in favour of the Enlightenment ethical position -- 'the sovereignty of technique', 'demonstrative moral truth', 'the politics of faith' and 'enterprise association' -- by revitalising the importance of 'traditional knowledge', 'conversation', 'intimation', 'the politics of scepticism' and 'civil association'. Oakeshott is neither a doctrinal liberal nor a dogmatic conservative, but a philosophical sceptic. Moreover, Oakeshott's contribution to history not only lies in his effort to transcend the Enlightenment historiographical position -- by separating the historical from the naturalised conception of History on which so-called 'scientific history' rests -- but also in his idealistic solution for the 'temporal dilemma' and the 'epistemic tension' in history that have long bothered philosophers.

**technical skills consist of the:** THE ILLUSION OF THE CYBER INTELLIGENCE ERA Fadi Abu Zuhri, 2019-02-21 This book is the result of my two academic interests. On a professional level I have too often found that there is a lot of misleading information being dished out on the reasons behind some of the most high profile cyber attacks. Both the media and the so called security experts end up in a blame game without factual evidence or a clear understanding of what lies behind the obvious. My research focuses on proposing a model for Cyber Criminal Psychology & Profiling that incorporates multiple intelligence, Interviewing Techniques, Cyber Criminal Psychology, Cyber forensics and Offender Profiling. The traditional model of offender profiling does not incorporate the human side of the profiler nor the offender. A better profile of a Cyber-Criminal will help in speeding up the investigation process and ensuring better identification of the Cyber-Criminal. On a personal level, especially after going through a traumatic cancer struggle, I have found that people around me are missing vital things in life. Some out of ignorance and some out of misinterpretation of facts. The book is a collection of 31 articles, which took almost three years of constant effort. The book is split into five chapters, each representing a unique theme, each with multiple articles of interest. Chapter 1 focuses on Cyber Forensics, Chapter 2 on Profiling, Chapter 3 on Interview Techniques, Chapter 4 on Forensics Psychology and Chapter 5 on Multiple Intelligences. Although the chapters are in a certain order, each article can be read on its own in any order. The one thing I learnt in preparing the articles is how valuable knowledge of the self and surroundings are in figuring out better solutions for oneself and in the workplace. I hope you enjoy reading these articles as much as I enjoyed writing them. I also hope you find them useful.
