why are you interested in stanford health care: Sidelined Susan Salenger, 2025-07-30 DON'T MAKE ANOTHER HEALTHCARE DECISION WITHOUT READING THIS BOOK. Learn how to navigate a broken healthcare system. I told my doctors about my pain for years, but they told me it was all in my head... My doctor said I needed a hysterectomy to relieve my symptoms that I was sure were just normal menopause. Unfortunately, I agreed to the surgery anyway. Why did I agree to that? If men had cramps, they'd have cured this by now... These and countless other comments from women who've suffered at the hands of the healthcare industry are frighteningly common, but they don't have to be. *Sidelined* describes how our healthcare system has marginalized women and made it seemingly impossible for them to take control over their own healthcare. But what's behind this nationwide medical crisis? In *Sidelined*, writer and researcher Susan Salenger explains why women are misdiagnosed more often than men, and why their symptoms often go unrecognized or are even disputed. This book teaches women how to ask the right questions to get the care they deserve. It equips readers with the knowledge, language, and tools they need to overcome the gender bias in the medical industry and get the best healthcare possible. Braunstein, 2022-02-10 This extensively revised textbook describes and defines the US healthcare delivery system, its many systemic challenges and the prior efforts to develop and deploy informatics tools to help overcome these problems. Now that electronic health record systems are widely deployed, the HL7 Fast Healthcare Interoperability standard is being rapidly accepted as the means to access and share the data stored in those systems and analytics is increasing being used to gain new knowledge from that aggregated clinical data, this book goes on to discuss health informatics from an historical perspective, its current state and likely future state. It then turns to some of the important and evolving areas of informatics including

electronic health records, clinical decision support, population and public health, mHealth and analytics. Numerous use cases and case studies are employed in all of these discussions to help readers connect the technologies to real world challenges. *Health Informatics on FHIR: How HL7's API is Transforming Healthcare* is for introductory health informatics courses for health sciences students (e.g., doctors, nurses, PhDs), the current health informatics community, computer science and IT professionals interested in learning about the field and practicing healthcare providers. Though this textbook covers an important new technology, it is accessible to non-technical readers including healthcare providers, their patients or anyone interested in the use of healthcare data for improved care, public/population health or research.

why are you interested in stanford health care: Beatriz da Costa Daniela Lieja Quintanar, 2024-09-24 A long overdue look at the artistic investigations of the late artist Beatriz da Costa, revealing the depth and prescience of her work. Beatriz da Costa: (un)disciplinary tactics is the most comprehensive documentation and analysis to date of late artist Beatriz da Costa's (1974-2012) groundbreaking work. As a retrospective of a brilliant young artist, it renders a social portrait of her artistic practice by both contextualizing the work in its historical period (late 1990s to early 2010s) and extending the work's socio-political concerns to the present. The book, edited by Daniela Lieja Quintanar, features a collection of essays by curators, artists, and researchers from a variety of fields, including technoscience, tactical media, cancer research, environmental justice, performance art, and participatory art. It also includes a group of reflections written by former collaborators and close friends. Beginning with da Costa's early projects in the late 1990s as a student in the arts and robotics at Carnegie Mellon University, the book surveys her collaborative work with collectives Critical Art Ensemble and Preemptive Media, as well as her research-based and large-scale installations made in the early 2000s. The publication is a faithful record of da Costa's entire oeuvre, including information about artworks she left incomplete due to financial, health, or time limitations. Additionally, the book includes da Costa's own critical writing on art and politics, as well as self-authored descriptions of her own work and an unflinching interview with cancer researcher Robert Schneider, who was a fundamental figure for da Costa at the end of her young life. The book accompanies a solo exhibition at LACE (Los Angeles Contemporary Exhibitions) as part of the Getty's PST ART: Art & Science Collide initiative.

why are you interested in stanford health care: *Seeing Patients* Augustus A. White III, David Chanoff, 2011-05-15 If you're going to have a heart attack, an organ transplant, or a joint replacement, here's the key to getting the very best medical care: be a white, straight, middle-class male. This book by a pioneering black surgeon takes on one of the few critically important topics that haven't figured in the heated debate over health care reform—the largely hidden yet massive injustice of bias in medical treatment. Growing up in Jim Crow-era Tennessee and training and teaching in overwhelmingly white medical institutions, Gus White witnessed firsthand how prejudice works in the world of medicine. And while race relations have changed dramatically, old ways of thinking die hard. In *Seeing Patients* White draws upon his experience in startlingly different worlds to make sense of the unconscious bias that riddles medical treatment, and to explore what it means for health care in a diverse twenty-first-century America. White and coauthor David Chanoff use extensive research and interviews with leading physicians to show how subconscious stereotyping influences doctor-patient interactions, diagnosis, and treatment. Their book brings together insights from the worlds of social psychology, neuroscience, and clinical practice to define the issues clearly and, most importantly, to outline a concrete approach to fixing this fundamental inequity in the delivery of health care.

why are you interested in stanford health care: *No, It Is Not In My Head* Nicole Hemmenway, 2010-04-06 "A story of triumph and courage . . . Nicole Hemmenway demonstrates hope, guts and faith for any chronic pain sufferer or caregiver" (Betsy Turner Nunley, author of *Preemie to Woman in Sixty Short Years*). At seventeen, Nicole Hemmenway believed her life was just beginning. She was a senior in high school looking forward to college and living on her own. However, all her dreams vanished the moment she became injured. Diagnosed with complex regional pain syndrome (CRPS), she soon learned that mainstream medicine viewed her pain and symptoms as being untreatable and incurable. She was living a nightmare. With no use of her right hand and minimal use of her arm, she depended on massive amounts of narcotics to survive each day. Yet even that could not control her agony. The crippling pain was so paralyzing that she faced periods where she was bedridden or wheelchair bound. All she had to hold on to was hope. Hope that her miracle would someday arrive . . . *No, It Is Not in My Head* is a courageous memoir that presents answers and allows others to believe in the unimaginable. "A must-read for anyone

suffering from chronic pain or anyone who knows someone battling it . . . No, It Is Not in My Head is not a cure for pain, but more a cure for hopelessness. . . . Beautifully written, incredibly inspirational and highly recommended!" —Robin Cain, author of The Secret Miss Rabbit Kept "A riveting and uplifting tale, not to be missed." —Midwest Book Review
