This set also includes a resource guide listing books, journals, and Internet sources that deal with various aspects of cancer. The appendix provides a good statistical overview of cancer rates by race and state, and a glossary is adapted from the National Cancer Institute's online glossary. Although other reference works are available on a wide range of cancer treatments and research topics, this work goes beyond the provisions of information on medical conditions to help readers better understand the impact of behavioral change on cancer prevention. wistar fellowship in biomedical research: Iron or Steel Marek Maria Pienkowski, 2018-06-07

Marek Maria Pienkowski was born in Lodz, Poland, on Sept. 8, 1945, with a hereditary title of nobility in the country enduring the tribulations of World War II longer than any other in Europe. Pienkowski's rebellion against Poland's loss of independence after the war began at age five or six, when he became a founding member, with two friends, of the modestly-named Organization to Liberate Poland. The trio recognized that liberation required secret identities, so the author was Snake and his friends were Fox and Wolf. His conflicts with the Polish Communist Party escalated to the point where he left Poland rather than accepting an offer of party membership. He eventually made his way to the United States, where he pursued opportunities in Philadelphia, Baltimore, East Lansing, and Detroit before settling in Knoxville, Tennessee. A noted Polish-American scientist, biomedical entrepreneur, and founder of a network of clinics, Dr. Pienkowski advanced cancer research, genetic engineering, and treatment of immunological disease. He has been a prolific patron of the arts, formally accredited cultural ambassador, and counselor to US governors, representatives, senators, and presidents. From breaking the suffocating confines of Communist rule to making groundbreaking medical discoveries, achieving great financial success, and acting to bring human cultures together, the author looks back at his extraordinary life in this inspirational memoir.

wistar fellowship in biomedical research: Rabid Bill Wasik, Monica Murphy, 2012-07-19 The most fatal virus known to science, rabies-a disease that spreads avidly from animals to humans-kills nearly one hundred percent of its victims once the infection takes root in the brain. In this critically acclaimed exploration from the authors of Our Kindred Creatures, journalist Bill Wasik and

veterinarian Monica Murphy chart four thousand years of the history, science, and cultural mythology of rabies. From Greek myths to zombie flicks, from the laboratory heroics of Louis Pasteur to the contemporary search for a lifesaving treatment, *Rabid* is a fresh and often wildly entertaining look at one of humankind's oldest and most fearsome foes. A searing narrative. -The New York Times In this keen and exceptionally well-written book, rife with surprises, narrative suspense and a steady flow of expansive insights, 'the world's most diabolical virus' conquers the unsuspecting reader's imaginative nervous system. . . . A smart, unsettling, and strangely stirring piece of work. -San Francisco Chronicle Fascinating. . . . wistar fellowship in biomedical research: Golden Holocaust Robert Proctor, 2011 "The great cause of global health is in Robert Proctor's debt. *Golden Holocaust* is a model of impassioned scholarly research and advocacy. As Proctor so powerfully demonstrates, the time has come to hold the tobacco industry accountable for the massive disease, debility, and death that they produce around the world."--Allan M. Brandt, author of *The Cigarette Century* Robert Proctor unpacks the sad history of an industrial fraud. His tightly reasoned exploration touches on all topics on which the tobacco makers lied repeatedly to Congress and the public.--Don Kennedy, President Emeritus, Stanford University and former Editor, *Science* This book is a remarkable compendium of evil. It will keep you spinning from page one through the last with a detailed description of how one of the most notorious industries in American history deceived and manipulated the public, the politicians, and the scientific community into allowing an age-old toxin to be breathed directly into the lungs of millions of Americans. It is the type of book that makes you wonder how, in God's name, this could have happened?--David Rosner, author of *Deceit and Denial* Proctor powerfully documents how a small number of tobacco companies caused a tragic, global epidemic. His account of this history and of the 'lessons learned' is relevant to the ongoing effort to end the tobacco epidemic and to efforts to control emerging pandemics of non-communicable diseases. --Jonathan M. Samet, M.D., M.S., Director, Institute for Global Health, University of Southern California "Proctor weaves together the public historical record with inside details and insights from thousands of once secret industry documents. Anyone who cares about health, deception, science or politics will learn something new from this book."--Stanton A. Glantz, Professor of Medicine, UC San Francisco, and author of *The Cigarette Papers* A powerful indictment of the world's deadliest industry--John R. Seffrin, PhD, Chief Executive Officer, American Cancer Society By carefully analyzing formerly secret industry documents, Proctor has shown how cigarette manufacturers knew that the filters on virtually all cigarettes sold today are utterly fraudulent. His call for a ban is likely to change how we think about such devices; this excellent book is a must read for tobacco control and environmental activists alike.--Thomas E. Novotny, MD MPH, Former US Assistant Surgeon General and CEO, Cigarette Butt Pollution Project. Scholarly yet eminently readable, indeed gripping, this book asks us to consider what the end game for tobacco might look like. A must-read for policy makers and public health officials, and for anyone struggling against the tobacco industry in the field.--Professor Judith Mackay, Senior Advisor, World Lung Foundation, Hong Kong, China SAR The machine-rolled cigarette is the single most deadly consumer product ever made. Proctor's powerful, witty, and wide-ranging book shows how we came to accept as normal the promotion and use of products that have caused a global epidemic of disease and death. But more importantly, he outlines a way to end this grim chapter in human history.--Ruth E. Malone, RN, PhD, FAAN, Editor, *Tobacco Control* "This

is the most important book on smoking in fifty years. Proctor's unique mix of scholarship, readability, wit and political understanding tells a no-holds-barred story with conclusions that governments cannot afford to ignore. It will change the course of public health history."--Professor Mike Daube, President, Australian Council on Smoking and Health Proctor draws masterfully from a vast archive of documents wrested from the industry, including many never before discussed, and mounts an unforgettable case about what the tobacco industry has done and what we must do about it. This is the book to help us understand what we must do to save lives.--Peter Galison, author of Einstein's Clocks, Poincaré's Maps Golden Holocaust will stand indelibly as a landmark in the field of medicine and the history of science. It is a monument of committed scholarship and cool passion, making brilliant use of the new technics of data-mining to reveal a terrible calculus, while giving the lie to claims that advocacy must be the enemy of objectivity. Lives, far too many lives, depend on what this book contains.--Iain Boal, Birkbeck College, London and Guggenheim Fellow in Science and Technology Robert Proctor draws an unvarnished conclusion: that the tobacco industry, and the men who led it, were evil, plain and simple. They knowingly sold a product that, when used as intended, killed people. And then they conspired to suppress the evidence. Not everyone will agree with Proctor, but anyone interested in the intertwined issues of science and health, and culture and commerce, needs to read this book.--Naomi Oreskes, coauthor of Merchants of Doubt "Robert Proctor lays bare the deliberate choices made by the tobacco companies to addict their customers and cause premature death. Here is clarity to the unprecedented scientific fraud perpetrated by the tobacco industry."--William A. Farone, Ph.D. Chairman, Applied Power Concepts, Inc. (formerly Director of Scientific Research for Philip Morris USA, 1977-1984).
