with 6 down language lover nyt: Love in the Afterlife Richard Striner, 2016-04-29 This is a definitive study of films that have been built around the themes of love, death, and the afterlife—films about lovers who meet again (and love again) in heaven, via reincarnation, or through other kinds of after-death encounters. Far more than books about mere ghosts in the movies or religion in movies, *Love in the Afterlife* presents a complex but highly distinctive and unique pattern—the love-death-afterlife pattern—as it was handed down by the ancient Egyptians and Greeks (in the Isis and Orpheus myths, for example), developed by Freud and his followers in the duality of “Eros and Thanatos,” and then featured in popular movies from the 1920s to the recent past. Among its other qualities, *Love in the Afterlife* may encourage readers to look at movies differently and reflect upon the possibility that other patterns in cinema may have gone undetected for years. Furthermore, this book will show how the love-death-afterlife theme found its way into all sorts of different film types: melodramas, comedies, war films, horror films, film noir, and other genres. The book will be well illustrated and quotations from film reviews will enliven its pages. A

long appendix gives production data on almost sixty individual films.

with 6 down language lover nyt: *Language Machines* Leif Weatherby, 2025-06-24 How generative AI systems capture a core function of language Looking at the emergence of generative AI, *Language Machines* presents a new theory of meaning in language and computation, arguing that humanistic scholarship misconstrues how large language models (LLMs) function. Seeing LLMs as a convergence of computation and language, Leif Weatherby contends that AI does not simulate cognition, as widely believed, but rather creates culture. This evolution in language, he finds, is one that we are ill-prepared to evaluate, as what he terms "remainder humanism" counterproductively divides the human from the machine without drawing on established theories of representation that include both. To determine the consequences of using AI for language generation, Weatherby reads linguistic theory in conjunction with the algorithmic architecture of LLMs. He finds that generative AI captures the ways in which language is at first complex, cultural, and poetic, and only later referential, functional, and cognitive. This process is the semiotic hinge on which an emergent AI culture depends. Weatherby calls for a "general poetics" of computational cultural forms under the formal conditions of the algorithmic reproducibility of language. Locating the output of LLMs on a spectrum from poetry to ideology, *Language Machines* concludes that literary theory must be the backbone of a new rhetorical training for our linguistic-computational culture.

with 6 down language lover nyt: Sex, Love, and Migration Alexia Bloch, 2017-12-15 Sex, Love, and Migration goes beyond a common narrative of women's exploitation as a feature of migration in the early twenty-first century, a story that features young women from poor countries who cross borders to work in low paid and often intimate labor. Alexia Bloch argues that the mobility of women is marked not only by risks but also by personal and social transformation as migration fundamentally reshapes women's emotional worlds and aspirations. Bloch documents how, as women have crossed borders between the former Soviet Union and Turkey since the early 1990s, they have forged new forms of intimacy in their households in Moldova, Ukraine, Belarus, and Russia, but also in Istanbul, where they often work for years on end. Sex, Love, and Migration takes as its subject the lives of post-Soviet migrant women employed in three distinct spheres—sex work, the garment trade, and domestic work. Bloch challenges us to decouple images of women on the move from simple assumptions about danger, victimization, and trafficking. She redirects our attention to the aspirations and lives of women who, despite myriad impediments, move between global capitalist centers and their home communities.

Antje Gamble, 2023-07-13 Enriching the existing scholarship on this important exhibition, Italy at Work: Her Renaissance in Design Today (1950-53), this book shows the dynamic role art, specifically sculpture, played in constructing both Italian and American culture after World War II (WWII). Moving beyond previous studies, this book looks to the archival sources and beyond the history of design for a greater understanding of the stakes of the show. First, the book considers art's role in this exhibition's import—prominent mid-century sculptors like Giacomo Manzù, Fausto Melotti, and Lucio Fontana were included. Second, it foregrounds the particular role sculpture was able to play in transcending the boundaries of fine art and craft to showcase innovative formalist aesthetics of modernism without falling in the critiques of modernism playing out on the international stage in terms of state funding for art. Third, the book engages with the larger socio-political use of art as a cultural soft power both within the American and Italian contexts. Fourth, it highlights the important role race and culture of Italians and Italian-Americans played in the installation and success of this exhibition. Lastly, therefore, this study connects an investigation of modernist sculpture, modern design, post-war exhibitions, sociology, and transatlantic politics and economics to highlight the important role sculpture played in post-war Italian and American cultural production. The book will be of interest to scholars working in art history, design history, museum studies, Italian studies, and American studies.
