This ETF provides investors with targeted exposure to a broad range of firms that are advancing AI applications across various industries, such as technology, healthcare, automotive, and financial services. Launched by WisdomTree Investments, the fund aims to capitalize on the rapid growth and innovation within the AI sector by offering a diversified investment solution.

Fund Objectives and Structure

The primary objective of the WisdomTree Artificial Intelligence ETF is to replicate the performance of the WisdomTree Artificial Intelligence Index, which includes companies

that derive a significant portion of their revenue from AI-related products and services. The ETF utilizes a passive management approach, seeking to mirror the index's composition while maintaining liquidity and cost efficiency for investors. It is structured to provide daily liquidity on major stock exchanges, making it accessible for both institutional and retail investors.

Investment Strategy and Index Composition

The investment strategy of the WisdomTree Artificial Intelligence ETF centers on selecting companies based on their involvement in AI innovation. The underlying index identifies firms through a rigorous screening process that evaluates revenue sources, research and development activities, and AI patent holdings. This ensures that the ETF's portfolio is concentrated on businesses with a measurable commitment to artificial intelligence technologies.

Index Selection Criteria

The WisdomTree Artificial Intelligence Index employs several quantitative and qualitative criteria to select its constituents. Companies must have at least 50% of their revenues linked to AI products or services, including areas like machine learning, natural language processing, robotics, and computer vision. The index is periodically rebalanced to reflect changes in the market and to incorporate emerging AI leaders while removing companies that no longer meet the eligibility criteria.

Portfolio Diversification

The ETF maintains diversification by including a range of companies varying in market capitalization and geographic location. While a significant portion of holdings is concentrated in North America, the fund also incorporates international firms engaged in AI development. This diversification helps mitigate risk and provides comprehensive exposure to the global AI ecosystem.

Sector Allocation and Top Holdings

The fund's performance is influenced by the technological advancements and adoption rates of AI across industries. Historical returns highlight the ETF's ability to capture the upside potential of emerging AI trends, although volatility remains a factor due to the sector's innovative nature.

wisdomtree artificial intelligence etf: The Digitalization of Financial Markets Adam Marszk, Ewa Lechman, 2021-10-10 The book provides deep insight into theoretical and empirical evidence on information and communication technologies (ICT) as an important factor affecting financial markets. It is focused on the impact of ICT on stock markets, bond markets, and other categories of financial markets, with the additional focus on the linked FinTech services and financial institutions. Financial markets shaped by the adoption of the new technologies are labeled 'digital financial markets'. With a wide-ranging perspective at both the local and global levels from countries at varying degrees of economic development, this book addresses an important gap in the extant literature concerning the role of ICT in the financial markets. The consequences of these processes had until now rarely been considered in a broader economic and social context, particularly when the impact of FinTech services on financial markets is taken into account. The book's theoretical discussions, empirical evidence and compilation of different views and perspectives make it a valuable and complex reference work. The principal audience of the book will be scholars in the fields of finance and economics. The book also targets professionals in the financial industry who are directly or indirectly linked to the new technologies on the financial markets, in particular various types of FinTech services. wisdomtree artificial intelligence etf: Investire con gli ETF e gli ETC Gabriele Bellelli,

2024-05-31T00:00:00+02:00 Questo libro è interamente dedicato al mondo degli ETF e degli ETC, prodotti finanziari, quotati in tempo reale sulla Borsa Italiana, che consentono di replicare l'andamento di un'attività finanziaria sottostante (un indice azionario, un indice obbligazionario o una materia prima). Nella prima parte dell'opera sono illustrate le principali caratteristiche degli ETF e degli ETC, una conoscenza necessaria per poter valutare tutti i fattori che influiscono sull'andamento dei prezzi. Nella seconda parte viene spiegato come selezionare gli ETF più efficienti da utilizzare nella costruzione di un portafoglio di investimento. Nella parte finale, invece, sono descritte alcune strategie operative che possono essere utilizzate dall'investitore che punta a ottenere un rendimento positivo nel medio-lungo periodo a fronte di un contenuto grado di rischio. L'autore esamina nel dettaglio quattro diverse strategie operative - sia a gestione passiva (lazy portfolio) sia a gestione attiva - ognuna delle quali mira a perseguire uno specifico obiettivo finanziario: un piano di accumulo, la costruzione di un portafoglio a "capitale protetto", di uno a "entrata periodica" e di uno volto a massimizzare il "rendimento e la performance". Il libro, accessibile a chi muove i primi passi sui mercati finanziari, è uno strumento prezioso anche per l'investitore esperto. Ogni strategia, oltre a essere oggettiva e replicabile, è corredata da validi test statistici, in modo da poterne verificare la profittabilità, le performance e le principali metriche di valutazione.
