wolf in spanish language: Cervantes, the Golden Age, and the Battle for Cultural Identity in

20th-Century Spain Ana María G. Laguna, 2021-07-29 Studies that connect the Spanish 17th and 20th centuries usually do so through a conservative lens, assuming that the blunt imperialism of the early modern age, endlessly glorified by Franco's dictatorship, was a constant in the Spanish imaginary. This book, by contrast, recuperates the thriving, humanistic vision of the Golden Age celebrated by Spanish progressive thinkers, writers, and artists in the decades prior to 1939 and the

Francoist Regime. The hybrid, modern stance of the country in the 1920s and early 1930s would uniquely incorporate the literary and political legacies of the Spanish Renaissance into the ambitious design of a forward, democratic future. In exploring the complex understanding of the multifaceted event that is modernity, the life story and literary opus of Miguel de Cervantes (1547-1616) acquires a new significance, given the weight of the author in the poetic and political endeavors of those Spanish left-wing reformists who believed they could shape a new Spanish society. By recovering their progressive dream, buried for almost a century, of incipient and full Spanish modernities, Ana María G. Laguna establishes a more balanced understanding of both the modern and early modern periods and casts doubt on the idea of a persistent conservatism in Golden Age literature and studies. This book ultimately serves as a vigorous defense of the canonical as well as the neglected critical traditions that promoted Cervantes's humanism in the 20th century.

wolf in spanish language: Evaluative Morphology from a Cross-Linguistic Perspective Lívia Körtvélyessy, 2015-01-12 This book presents the results of the first interdisciplinary approach to evaluative morphology based on the intersection of evaluative morphology and areal typology, and provides the first large-scale typological research based on a sample of 200 languages. Furthermore, it also represents the first work dealing with evaluative morphology as a feature of Standard Average European by comparing the SAE and world samples. Methodologically, it introduces the parameter of Evaluative Morphology Saturation, which identifies the richness of evaluative morphology in individual languages by reflecting the semantic, word-class and word-formation aspects of evaluative morphology. As such, this book provides a new and innovative approach to studying the semantics of evaluative morphology and evaluative-formation, represented by two cognitively founded models, a radial model of EM semantics and a model of evaluative formation. It is also the first contrastive psycholinguistic work that studies phonetic iconicity in evaluative morphology by way of experimental research into five different age groups of informants speaking three different languages.

wolf in spanish language: Variation in Second and Heritage Languages Robert Bayley, Dennis R. Preston, Xiaoshi Li, 2022-07-15 Variationist work in Second Language Acquisition (SLA) began in the mid 1970s and steadily progressed during the 1980s. Much of it was reviewed along with newer approaches in Bayley and Preston 1996 (B&P), heavily devoted to VARBRUL analyses that exposed the variability in developing interlanguages and placed variationist work within the canon of SLA. This new volume features three developing trends. First, it widens the scope of L1s of learners (from 6 in B&P to 8) and L2 targets (2 in B&P to 7) and in each case has brought more careful demographic and variable considerations to bear, including heritage languages and study abroad. Second, it modernizes statistics by moving from VARBRUL to the more widely used log-odds probabilities that allow more detailed consideration of variables and their influences. Finally, it deepens consideration of variable sociolinguistic meaning in learner behaviors, a dominating feature

of 3rd Wave variationist work.
