Overview of Women's Internal Medicine at LGH

Women's internal medicine at LGH is designed to provide specialized healthcare services that focus on the internal medical needs of adult female patients. This branch of medicine recognizes the physiological and hormonal differences that influence disease presentation and progression in women. LGH integrates advanced diagnostic tools and evidence-based treatment protocols to deliver comprehensive care. The program aims to promote preventive health, early detection of diseases, and effective management of complex medical conditions unique to women. By focusing on women's internal medicine, LGH addresses health concerns ranging from reproductive health to chronic illnesses, ensuring each patient receives individualized care tailored to her specific needs.

Importance of Specialized Care for Women

Women often experience medical conditions differently than men, necessitating specialized care approaches. Hormonal fluctuations, pregnancy, menopause, and genetic predispositions contribute to distinct health challenges. Women's internal medicine at LGH acknowledges these factors by providing gender-specific assessments and treatments. This specialization leads to improved diagnosis accuracy, better management of chronic illnesses such as autoimmune diseases,

cardiovascular conditions, and osteoporosis, and enhanced preventive strategies that consider women's unique health risks.

Integration with Other Medical Specialties

LGH emphasizes a multidisciplinary approach in women's internal medicine by collaborating with gynecology, endocrinology, cardiology, and other specialties. This integration ensures comprehensive evaluation and management of conditions that overlap multiple systems. For example, managing diabetes in women requires coordination between internal medicine specialists and endocrinologists to optimize outcomes. Similarly, cardiovascular risk assessment incorporates insights from cardiology, facilitating personalized treatment plans.

Common Health Conditions Addressed

Women's internal medicine at LGH covers a broad spectrum of health issues, particularly those prevalent or unique to women. The program targets both acute and chronic conditions, offering expert management and preventive guidance. Addressing these common health concerns improves quality of life and reduces the risk of complications.

Cardiovascular Disease in Women

Cardiovascular disease remains the leading cause of death among women, yet symptoms often differ from those in men, leading to underdiagnosis. Women's internal medicine at LGH prioritizes early detection through screening and risk assessment tailored to female physiology. Treatment strategies include lifestyle modification, pharmacotherapy, and monitoring to prevent adverse events.

Autoimmune and Rheumatologic Conditions

Autoimmune diseases disproportionately affect women, with conditions such as lupus, rheumatoid arthritis, and multiple sclerosis requiring specialized care. LGH's internal medicine specialists are trained to identify subtle symptoms and provide comprehensive management, including immunosuppressive therapy and symptom relief.

Metabolic and Endocrine Disorders

Disorders such as thyroid disease, diabetes, and osteoporosis often manifest differently in women. Women's internal medicine at LGH offers thorough evaluation and treatment plans that consider hormonal influences and life stages like pregnancy and menopause, optimizing patient outcomes.

Other Common Conditions

- Hypertension management with attention to pregnancy-related complications

- Chronic kidney disease monitoring
- Mental health disorders including anxiety and depression
- Preventive screenings for cancers such as breast and cervical

Services and Treatments Available

LGH provides a comprehensive range of services within women's internal medicine to address diverse medical needs. These services are designed to deliver evidence-based care through both outpatient and inpatient settings.

Preventive Health Services

Preventive care is a cornerstone of women's internal medicine at LGH. Routine screenings, immunizations, and lifestyle counseling are offered to reduce the risk of chronic diseases. These include mammograms, bone density tests, blood pressure monitoring, and cholesterol profiling. Patient education on nutrition, exercise, and smoking cessation is also emphasized.

Chronic Disease Management

Effective management of chronic illnesses such as diabetes, hypertension, and heart disease is prioritized. LGH employs individualized treatment plans, regular monitoring, medication adjustments, and coordination with specialists to maintain optimal health and prevent complications.

Diagnostic Testing and Monitoring

Advanced diagnostic tools are utilized to accurately assess medical conditions. These include blood tests, imaging studies, electrocardiograms, and specialized hormonal evaluations. Continuous monitoring through follow-up visits ensures timely intervention and treatment modifications.

Medication Management and Therapy

Women's internal medicine at LGH includes careful evaluation of pharmacologic therapies, considering potential side effects and interactions specific to women. This ensures safe and effective medication use tailored to individual patient profiles.

The Medical Team and Expertise

The success of women's internal medicine at LGH relies on a highly skilled team of healthcare professionals committed to delivering expert care. The team consists of board-certified internists with

specialized training in women's health.

Physicians and Specialists

Internists at LGH possess extensive knowledge in managing complex medical conditions in women. Many have additional certifications or training in women's health and collaborate closely with specialists in gynecology, endocrinology, cardiology, and rheumatology to provide integrated care.

Nursing and Support Staff

Experienced nurses and medical assistants play a vital role in patient education, care coordination, and follow-up. They ensure seamless communication between patients and physicians, contributing to comprehensive treatment plans and adherence.

Multidisciplinary Collaboration

LGH fosters a team-based approach where physicians, nurses, dietitians, social workers, and other healthcare providers work together to address all aspects of women's health. This collaboration enhances patient outcomes and supports holistic care delivery.

Patient-Centered Care and Support

Women's internal medicine at LGH emphasizes patient-centered care, focusing on individual preferences, values, and needs throughout the healthcare journey. This approach ensures that treatment plans align with each woman's lifestyle and health goals.

Personalized Treatment Plans

Every patient receives a customized care plan developed after thorough evaluation and discussion. The plans consider medical history, current health status, and personal preferences, fostering adherence and satisfaction.

Education and Counseling

LGH provides extensive educational resources and counseling services to empower women in managing their health. Topics include disease prevention, medication management, nutrition, and mental health support.

Support Groups and Resources

Recognizing the importance of psychosocial well-being, LGH offers access to support groups for chronic disease management, stress reduction, and lifestyle changes. These resources enhance

community and patient engagement.

women s internal medicine lgh: Medical Society of Erie County Stacey Watt, M.D., MBA, FASA and Aimana ElBahtity, Esq. , 2021 The Medical Society of Erie County was founded on September 1, 1821, by the first physician in Erie County, Cyrenius Chapin, MD. It began as a means of fulfilling a requirement of New York State law, since all physicians within the state were required to belong to a local medical society at that time. Through the years, the Medical Society of Erie County has been marked by innovative physician leaders who paved the way for the development of Buffalo. Notably, by 1903, Buffalo had the lowest death rate of any city of its size in the world based on the impact of Buffalo's health commissioner during the typhoid pandemic, Ernest Wende, MD. Furthermore, leaders of the Medical Society of Erie County founded the University at Buffalo School of Medicine and played a critical role in the development and advancement of Buffalo's regional hospitals, both yesterday and today. As we confront today's global pandemic, we are pleased to note that Erie County's current health commissioner, Gale Burstein, MD, MPH, is also a distinguished member of the Medical Society of Erie County.

women s internal medicine lgh: Family Medicine Obstetrics E-Book Stephen D. Ratcliffe, 2008-02-29 Whether you offer comprehensive pregnancy care in your primary care facility, or provide prenatal and postpartum care, this book delivers the guidance you need to optimize health for both mothers and their babies. It covers all aspects of birth care, from preconception counseling and prenatal care, through labor and delivery (both low-risk and complicated), to postpartum care and the first month of life. The completely revised third edition includes the most up-to-date, evidence-based standards of care. It offers information that is patient centered, prevention oriented, educational, and sensitive to the care of the whole woman and her family. Features a reader-friendly outline/narrative format for ease of use in daily clinical practice. Describes how to care for patients with a wide range of medical conditions during pregnancy as well as pregnancy-related conditions. Takes a whole-family approach to maternity care, with discussions of maternal and paternal adjustment, marital adjustment, sibling adjustment, single-parent families, and return-to-work issues. Provides patient and family education materials on a full range of topics, from nutrition in pregnancy to breastfeeding. Features a section on alternative medicine in maternity care. Provides detailed instruction for a wide array of procedures, including cesarean delivery, perineal repair of simple and complex lacerations, circumcision, assisted deliveries, and amnioinfusion. A continued strong emphasis on evidence-based medicine includes an ongoing summary of Level A recommendations throughout the text. A new chapter summarizes practical applications of how to incorporate continuous quality improvement and enhanced medical safety into the maternity care setting. A new section details which immunizations can be used safely during pregnancy. A section on Centering Pregnancy discusses this new model of care and how it incorporates longitudinal group.

women s internal medicine lgh: Improving Cancer Diagnosis and Care National

Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, National Cancer Policy Forum, 2019-08-15 A hallmark of high-quality cancer care is the delivery of the right treatment to the right patient at the right time. Precision oncology therapies, which target specific genetic changes in a patient's cancer, are changing the nature of cancer treatment by allowing clinicians to select therapies that are most likely to benefit individual patients. In current clinical practice, oncologists are increasingly formulating cancer treatment plans using results from complex laboratory and imaging tests that characterize the molecular underpinnings of an individual patient's cancer. These molecular fingerprints can be quite complex and heterogeneous, even within a single patient. To enable these molecular tumor characterizations to effectively and safely inform cancer care, the cancer community is working to develop and validate multiparameter omics tests and imaging tests as well as software and computational methods for interpretation of the resulting datasets. To examine opportunities to improve cancer diagnosis and care in the new precision oncology era, the National Cancer Policy Forum developed a two-workshop series. The first workshop focused on patient access to expertise and technologies in oncologic imaging and pathology and was held in February 2018. The second workshop, conducted in collaboration with the Board on Mathematical Sciences and Analytics, was held in October 2018 to examine the use of multidimensional data derived from patients with cancer, and the computational methods that analyze these data to inform cancer treatment decisions. This publication summarizes the presentations and discussions from the second workshop.

women s internal medicine lgh: Critical Care Study Guide Gerard J. Criner, Rodger E. Barnette, Gilbert E. D'Alonzo, 2010-06-27 Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states require extensive knowledge and up-to-date clinical information. An extensive knowledge of basic pathophysiology, as well as awareness of the appropriate diagnostic tests and treatments that are used to optimize care in the critically ill is essential. Since our first edition 7 years ago, new information crucial to the care and understanding of the critically ill patient has rapidly accumulated. Because this knowledge base crosses many different disciplines, a comprehensive multidisciplinary approach presenting the information is essential, similar to the multidisciplinary approach that is used to care for the critically ill patient. We have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order to understand the pathogenesis and optimum care of a variety of critical illnesses, we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome, an expanded discussion of the physiology and operation of mechanical ventilation, obstetrical care in the ICU, neurosurgical emergencies, acute coronary syndromes, cardiac arrhythmias, role of whole body rehabilitation in the ICU, ethical conduct of human research in the ICU, and nursing care of the ICU patient.

women s internal medicine lgh: Developing and Sustaining an Effective and Resilient Oncology Careforce National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, National Cancer Policy Forum, 2019-11-24 The oncology careforce faces challenges as population growth in the U.S. contributes to increases in the number of patients diagnosed with cancer. Significant advances in cancer research, screening and diagnostic practices, and treatment have led to the age-adjusted declining mortality rate from cancer. However, as the field continues to develop and advance, cancer care has become more complex than ever before. There is a growing concern regarding the U.S. health care system's capacity to deliver high-quality cancer care to the increasing number of patients. The National Academies convened a workshop on February 11-12, 2019 to explore trends in cancer care and identify opportunities for improvement in the rapidly developing oncology careforce. Discussions at the workshop primarily focused on trends in demographics, the careforce, and oncology practice, as well as implications for the future of cancer care and strategies to improve the organization and delivery of cancer care. Opportunities to change policy and leverage technologies in oncology were also identified. This publication summarizes the presentations and discussions from the workshop.

women s internal medicine lgh: Neuropsychology of Cardiovascular Disease Shari R. Waldstein, Merrill F. Elias, 2015-02-11 Cardiovascular disease (CVD) is the leading cause of morbidity and mortality in the United States and most westernized nations. Both CVDs and their risk factors confer substantial risk for stroke and dementia, but are also associated with more subtle changes in brain structure and function and cognitive performance prior to such devastating clinical outcomes. It has been suggested that there exists a continuum of brain abnormalities and cognitive difficulties associated with increasingly severe manifestations of cardiovascular risk factors and diseases that precede vascular cognitive impairment and may ultimately culminate in stroke or dementia. This second edition examines the relations of a host of behavioral and biomedical risk factors, in addition to subclinical and clinical CVDs, to brain and cognitive function. Associations with dementia and pre-dementia cognitive performance are reported, described, and discussed with a focus on underlying brain mechanisms. Future research agendas are suggested, and clinical implications are considered. The volume is a resource for professionals and students in neuropsychology, behavioral medicine, neurology, cardiology, cardiovascular and behavioral epidemiology, gerontology, geriatric medicine, nursing, adult developmental psychology, and for other physicians and health care professionals who work with patients with, or at risk for, CVDs.

women s internal medicine lgh: Health Literacy and Communication Strategies in Oncology National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Roundtable on Health Literacy, National Cancer Policy Forum, 2020-03-10 Health literacy is a critical skill for engaging in healthy behaviors to reduce

disease risk and improve health outcomes across the continuum of cancer care. However, estimates suggest that more than one-third of the U.S. adult population has low health literacy, and nearly half of all patients with cancer have difficulty understanding information about their disease or treatment. Low health literacy among patients with cancer is associated with poor health and treatment outcomes, including lower adherence to treatment, higher rates of missed appointments, and an increased risk of hospitalization. Low health literacy can also impede informed decision making, especially as cancer care becomes increasingly complex and as patients and their families take more active roles in treatment decisions. To examine opportunities to improve communication across the cancer care continuum, the National Cancer Policy Forum collaborated with the Roundtable on Health Literacy to host a workshop, Health Literacy and Communication Strategies in Oncology, July 15-16, 2019, in Washington, DC. Patients, patient advocates, clinicians, and researchers, representatives of health care organizations, academic medical centers, insurers, and federal agencies explored the challenges of achieving effective communication in cancer care. This publication summarizes the presentations and discussions of the workshop.
